# Ovidiu Neagu
# SQL Server Database Developer | 9 Years' Experience

ionut.ovidiu.neagu@outlook.com, London
https://www.linkedin.com/in/ovi-neagu-33716b99/

SQL Server Database Developer with 9 years' experience developing T-SQL procedures, views, and functions, diagnosing performance issues via execution plans, and managing structured changes across Dev/Test/Production environments for business-critical systems.

### Technical Skills

- **Microsoft SQL Server** (9 years):
    - Led optimisation projects, reducing query times and improving reliability
    - Monitoring performance of production servers, managing storage and database health
    - Indexing strategies and performance tuning
    - Scheduled various jobs using SQL Agent
- **T-SQL** (9 years): Developed complex stored procedures and functions for business-critical processes.
- **SSIS & SSRS (**2 years): Built and maintained ETL pipelines and reporting solutions.
- **Informatica Suite** (3 years): Automated data workflows and improved data quality.
- **Power BI** (1 year): Assisted analysts in building dashboards and reports.
- **Azure Platform** (1 year): Monitored pipeline runs, diagnosed failures to root cause ( data quality issues), fix issues
- **Pandas** (Python): Created scripts for data manipulation.

### Professional Skills

- Problem-solving: spotting patterns, investigating issues and proposing practical solutions
- Stakeholder management: understanding business needs and translating them into clear, useful analysis and recommendations
- Attention to detail: identifying errors, inconsistencies, and ensuring high-quality outputs
- Produced full technical documentation for ETL processes, SQL procedures, data flows and release steps
- Collaboration: worked with different teams (business, IT, marketing, operations) to deliver projects

## PROFESSIONAL EXPERIENCE

**Project Implementation and Support Consultant | Lanshore/Compincent, UK | February 2024 - Present**

*A consultancy specialising in Incentive Compensation Management (ICM), automation and RPA solutions, supporting global organisations with end-to-end implementation and technical delivery.*

- Implemented and supported customer deployments of RPA and ICM solutions
- Worked with employee/HR records, sales performance and incentive data and payroll inputs, integrating them across ETL pipelines to support compensation calculation and reporting for global clients.
- Deployed both front and backend components including stored procedures, triggers, functions, and views in SQL Server.
- Participated in the development and maintenance of reports using SSIS
- Worked on query optimization, utilizing different techniques to enhance the efficiency and performance of SQL queries, ensuring they run faster and use fewer resources

- Monitored and optimised the performance of ETL processes in Azure Data Factory, applying SQL code optimizations where required
- Managed database changes across Dev, Test, and Production environments following structured release processes.
- Collaborated with team members on different projects, ensuring high-quality solution delivery
- Implement solutions in line with departmental standards and development processes
-
- Used execution plan analysis to identify and resolve query bottleneck

Achievements:

- Reduced ETL runtime from 2.5 hours to just 11 minutes with SQL optimisation, improved workflow logic and performance tuning, delivering a major improvement to operational efficiency and SLA reliability
- Led and contributed to multiple ETL optimisation projects, working independently and as part of a team to enhance data pipelines across numerous clients
- Successfully migrated a client compensation database to a newer platform version, ensuring a smooth transition, full data integrity and zero disruption to operations
- Delivered multiple client projects end-to-end, including new processing workflows, reports and automation enhancements.

**Data Engineer / Cloud Administrator | Revionics, Atlanta, US | June 2021 - November 2023**

*A leading provider of AI-driven retail pricing, promotions, and markdown optimisation solutions, serving major retailers worldwide across cloud and on-premise platforms.*

- Initially hired as a Data Engineer and later promoted to a Cloud Administrator position
- Developed and managed packages, triggers, stored procedures and views in SQL Server to facilitate the integration of client data into our platform.
- Ownership of all ETL pipelines and data warehouse routines through SSIS and Informatica
- Including exports and imports of large datasets to external databases, through either SFTP(WinSCP or ADF SFTP)/AWS/CSV/API/JSON/XML/Azure Blob storage
- Identified and implemented process improvements, automating manual tasks and optimizing processing efficiency, thereby enhancing overall productivity
- Conducted daily reviews of support tickets, ensuring accurate severity classification and prioritization based on the client's tier level, maintaining a high level of customer service
- Assisted analysts with creating Power BI and SSRS reports, dashboards or workgroups as and when required.
- Primarily worked remotely, with a voluntary weekly presence in the office

Achievements:

- Significantly improved operational efficiency by reducing SLA related incidents from 5-6 per week to just 2-3 per month. Achieved through collaborative efforts with the development and implementation teams, as well as personal contributions in enhancing Informatica workflows and SQL stored procedures.
- Ensured smooth weekend operations as the only person responsible for monitoring running processes, guaranteeing timely completion for Monday morning SLAs.
- Maintained comprehensive documentation of all developments in the role, including previously undocumented processes, which greatly facilitated the onboarding process for new team members
- Played a key role in automating validation checks, exemplified by the development of custom SQL, Python and PowerShell scripts to validate a client's unique streaming solution, proving problem-solving and scripting abilities.

**Database Developer | More2, London UK | September 2016 - June 2021**

*A data-driven marketing and analytics consultancy helping retail and e-commerce brands optimise customer insight, attribution and data-led decision-making.*

- Managed customer data, prioritizing the secure storage and processing of Personally Identifiable Information (PII) as part of various marketing campaigns.
- Worked extensively with Single Customer View (SCV) data, gathering customer records from multiple marketing sources into a unified profile per customer, ensuring accuracy across campaigns.
- Oversaw 9-12 clients on a monthly basis, employing deduplication software to identify and merge duplicate records, ensuring accurate attribution of orders to the respective customers.
- Generated standardized reports and facilitated their export using SQL Server Reporting Services (SSRS).
- Utilized SQL Server Integration Services (SSIS) for running third-party outputs and sending data to cooperative partners.
- Conducted mailing campaigns, processing data with SQL Server and T-SQL, and performed quality checks on colleagues' work to ensure alignment with company standards
- Created and amended ad-hoc reports requested by internal departments and clients, including Subject access requests and removal of their data.

Achievements:

- Scripted and implemented the company's first fully automated mailing campaign, integrated into a stored procedure that streamlined the import of client requirements from specific files, data processing, and the export of output files to designated locations.
- Recognised as the "Happiest Person in the Company" for two consecutive years and received multiple "Employee of the Month" certificates.
- Demonstrated commitment and dedication by consistently being the first to arrive at work and the last to leave, contributing positively to team dynamics and project outcomes.

**2009–2016: Roles outside the data/IT sector**

## EDUCATION

- BSc (Hons) Computing and Information Systems | Second Class Honours (First Division) | London School of Science and Technology| London, UK | October 2016
- Bachelor's Degree in Finance (2:1) | University of Economic Sciences| Bucharest, Romania | July 2009
